Which address should I use?
Freedom server (s801) current data transfer multiplier: **10x** What is this?

NOTE: To address government blocking issues, we change IPs from time to time. We have switched over to DNS to make your life easier – you will not have to manually re-enter IP in your application each time we change IPs. The domain names shown above will always point to correct IP addresses.

You can use any of the domain names listed above instead of IP.

If your application does not support specifying domain name as Shadowsocks server IP, you can use actual IP addresses shown below. Note that if any of these IPs get blocked, we will replace them, and you will need to update your application configuration. In order to avoid this, we recommend using domain names specified above.

```
c23s1.jamjams.net | aes-256-gcm -> 96.45.177.55
c23s2.jamjams.net | aes-256-gcm -> 144.34.220.184
c23s3.jamjams.net | v2ray -> 199.193.127.154
c23s4.jamjams.net | v2ray -> 173.242.123.220
c23s5.jamjams.net | v2ray -> 104.225.159.104
c23s801.jamjams.net | v2ray freedom* -> 23.83.240.132
